Facial Reflexology Sorensensistem™ is a therapeutic intervention in which stimulation of zones and points on the face are utilized to alleviate health conditions in other parts of the body.

It is a new generation complementary therapy, as it is a health treatment with a beauty benefit. Combining ancient alternative therapies; Chinese energy meridians and acupuncture points, Vietnamese and South American tribal body maps, with modern science of neuro-anatomy.

The success and effectiveness of Facial Reflexology Sorensensistem™ lies in providing a system to identify the health imbalances within a client with the knowledge to initiate a healing process using the balance properties drawn from the above disciplines.

Additional procedures can include cranial work; use of nerve points together with aspects of colour and aromatherapy meridian balancing; intestinal link balances; Yamamoto points and balances.

The basic 7 step Sorensensistem™ treatment will usually take 40-45 minutes with additional procedures specific for each individual client's treatment plan taking the total therapy time to 1 hour. The entire surface of the face is treated (except the eyelids). A natural improvement in the blood circulation, lymphatic drainage, muscle tone and nerve function all contribute to a rejuvenation effect on the face resulting in a glowing complexion and improvements towards better health!

**Graham Sluter** MAR, ITEC (Dip), MCThA is a fully qualified Facial Reflexologist (Sorensensistem™).

He works on Wednesdays at "The Merlin Project" (Cornwall's multiple sclerosis therapy centre) [www.merlinproject.org.uk](http://www.merlinproject.org.uk) where he provides facial reflexology Sorensensistem™ treatments to MS Clients and their prime carers.
